

Experiment 6

Problem:

Define a counter function to print how many times the function is called using storage class

Student Details:

Name: madhiya zaid javed Roll No: 36 UIN: 251M040 Division: F

Code (C):

```
#include <stdio.h>
void counter() {
    static int calls = 0; // static retains value across calls
    calls++;
    printf("counter called %d time(s)\n", calls);
}
int main(){
    char name[]="madhiya zaid javed"; int roll=36; char uin[]="251M040"; char divc='F';
    printf("%s Roll:%d UIN:%s Div:%c\n",name,roll,uin,divc);
    for(int i=0;i<5;i++) counter();
    return 0;
}
```

Sample Input and Output (example run):

Output:

```
counter called 1 time(s)
counter called 2 time(s)
counter called 3 time(s)
counter called 4 time(s)
counter called 5 time(s)
```
