

Experiment 7

Problem:

- a) Find largest element in an array.
- b) Calculate sum of two matrices.

Student Details:

Name: madhiya zaid javed Roll No: 36 UIN: 251M040 Division: F

Code (C):

```
#include <stdio.h>
void partA(){
    int arr[] = {12, 45, 7, 89, 34};
    int n = sizeof(arr)/sizeof(arr[0]);
    int max = arr[0];
    for(int i=1;i<n;i++) if(arr[i]>max) max=arr[i];
    printf("Array elements: ");
    for(int i=0;i<n;i++) printf("%d ", arr[i]);
    printf("\nLargest element = %d\n", max);
}
void partB() {
    int A[2][2] = {{1,2},{3,4}};
    int B[2][2] = {{5,6},{7,8}};
    int C[2][2];
    for(int i=0;i<2;i++) for(int j=0;j<2;j++) C[i][j] = A[i][j] + B[i][j];
    printf("Sum matrix C:\n");
    for(int i=0;i<2;i++){
        for(int j=0;j<2;j++) printf("%d ", C[i][j]);
        printf("\n");
    }
}
int main(){
    char name[]="madhiya zaid javed"; int roll=36; char uin[]="251M040"; char divc='F';
    printf("%s Roll:%d UIN:%s Div:%c\n",name,roll,uin,divc);
    printf("Part A:\n"); partA();
    printf("Part B:\n"); partB();
    return 0;
}
```

Sample Input and Output (example run):

Part A Output:

Array elements: 12 45 7 89 34

Largest element = 89

Part B Output:

Sum matrix C:

6 8

10 12
