

Experiment 10

Problem:

- Add two numbers using pointers.
- Print elements of an array in reverse order using pointers.

Student Details:

Name: madhiya zaid javed Roll No: 36 UIN: 251M040 Division: F

Code (C):

```
#include <stdio.h>
void add_using_pointers(int *a, int *b, int *res){
    *res = *a + *b;
}
void reverse_print(int *arr, int n){
    for(int i=n-1;i>=0;i--) printf("%d ", *(arr+i));
    printf("\n");
}
int main(){
    char name[]="madhiya zaid javed"; int roll=36; char uin[]="251M040"; char divc='F';
    printf("%s Roll:%d UIN:%s Div:%c\n",name,roll,uin,divc);
    int x=5,y=7, r;
    add_using_pointers(&x,&y,&r);
    printf("Sum using pointers: %d + %d = %d\n", x,y,r);
    int arr[] = {1,2,3,4,5};
    printf("Array printed in reverse using pointers: ");
    reverse_print(arr, 5);
    return 0;
}
```

Sample Input and Output (example run):

Output:

Sum using pointers: 5 + 7 = 12

Array printed in reverse using pointers: 5 4 3 2 1
