

Experiment 2

Problem:

- a) Check if entered number is even or odd.
- b) Find sum of all odd numbers between two numbers entered by the user.

Student Details:

Name: madhiya zaid javed Roll No: 36 UIN: 251M040 Division: F

Code (C):

```
#include <stdio.h>
void partA() {
    int x;
    printf("Enter an integer: ");
    if(scanf("%d",&x)!=1) return;
    if(x % 2 == 0) printf("%d is Even\n", x);
    else printf("%d is Odd\n", x);
}
void partB() {
    int a,b,sum=0,low,high;
    printf("Enter two integers (lower upper): ");
    if(scanf("%d %d",&a,&b)!=2) return;
    low = (a<b)?a:b;
    high = (a<b)?b:a;
    for(int i=low;i<=high;i++) if(i%2!=0) sum += i;
    printf("Sum of odd numbers between %d and %d = %d\n", low, high, sum);
}
int main() {
    char name[] = "madhiya zaid javed"; int roll=36; char uin[]="251M040"; char divc='F';
    printf("Student: %s Roll: %d UIN:%s Div:%c\n", name, roll, uin, divc);
    printf("Part A:\\n"); partA();
    printf("Part B:\\n"); partB();
    return 0;
}
```

Sample Input and Output (example run):

Part A Input: 7

Output: 7 is Odd

Part B Input: 1 10

Output: Sum of odd numbers between 1 and 10 = 25
